

ORDER PORTAL

Better management of translations

Via the highly secure portal, you can access the services of 24translate safely at any time. There, you can manage translation orders and other language services particularly efficiently.

Why is the central management of translations important?

- It saves time through simplified commissioning, delivery and billing
- Translation budgets remain under control thanks to increased cost transparency
- Data security is enhanced through the protected uploading and downloading of documents
- Procurement is optimised via a standardised procurement channel

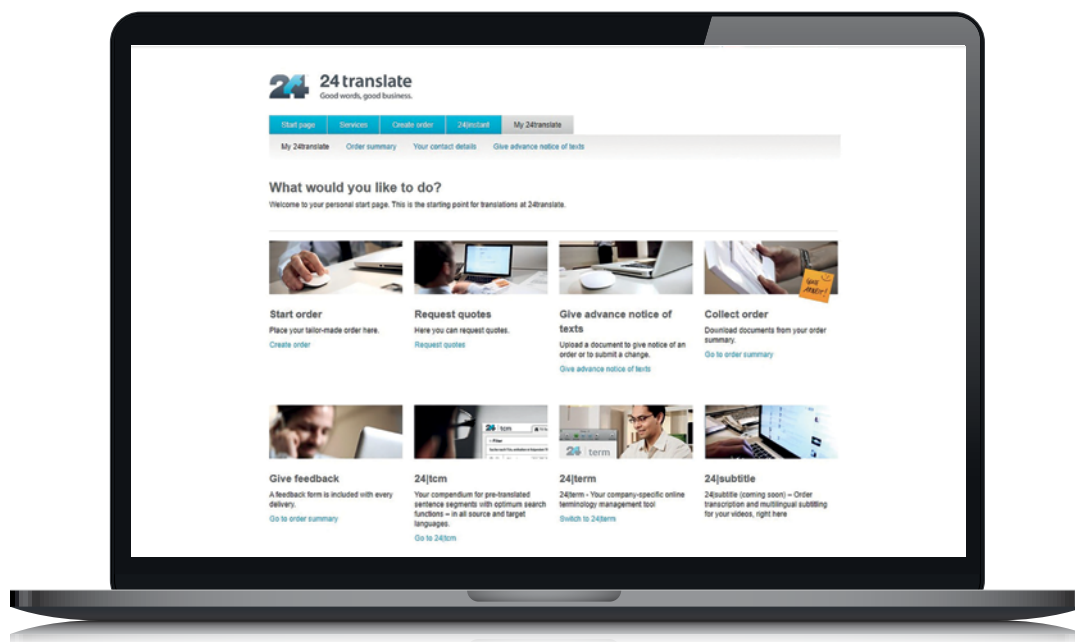

Use of the order portal makes good business sense...

- if it is important that translations can be commissioned around the clock, 365 days a year.
- if current processes for offer creation, commissioning and billing of translations are inefficient.
- if internal e-procurement systems (e.g. SAP Ariba or Coupa) are to be used for the procurement of translations.
- if confidential content needs translating, and data security is the top priority.
- if translations are to be procured only through the intended language service providers.

The order portal in use

Following online registration, the portal can be used at any time and in several languages via standard browsers – without the installation of additional programs.

If the translation volume increases or if the company has particular requirements, 24translate can set up an individual customer portal with extended functions.

The portal offers the following features:

- Free personal login per user
- Access to all translation services
- Offer creation through integrated price calculator
- Overview of the status of translation orders
- Downloading of translations and invoices

Individual portals also offer:

- Individualised homepage with company logo and photo
- Login with multi-factor authentication (MFA) or single sign-on (SSO)
- Entry of PO numbers and cost centres
- Punch-out integration in e-procurement systems
- Feedback function
- Access to translation memory and glossaries

Would you like to manage your translation orders more efficiently?
